👤 ABOUT ME

I'm a self-taught software engineer with a background in UX design. I'm analytical, hyperactive, but most of all an idea machine and compulsive problem solver. I have a [whole document](#) full of project ideas. Currently, I'm working on an open-source index of digital miniatures.

🎓 EDUCATION

Bachelor's Degree in Design - UTFPR

November 2021 – January 2023

📁 WORK HISTORY

UX Designer - WeON

November 2021 – January 2023

In my first few months I worked on standard designer tasks: interviewing users, prototyping, and working on the design system. Eventually I got to be part of more technical projects with a focus on data architecture, such as product integrations and API design. I was also in charge of project documentation, product ownership, and communication between the design and development teams. I was nicknamed "Fullstack Designer" by my colleagues.

Freelance Web Developer

January 2020 – Present

I develop accessible and optimized landing pages and corporate websites for small businesses. I got started with Wordpress and did some experimentation with Nuxt, but recently have been using Astro as my framework, Storyblok as CMS, and Netlify for hosting. This experience made me very skilled in HTML and CSS (SCSS).
